ALFALFA WEEVIL AGAIN FOUND NEAR RENO

C. W. Creel, Entomologist of Nevada Agricultural Experiment Station, in a communication dated April 28 says: " Mr. K. M. Pack of the Bureau of Entomology visited Reno in June 1920, and at that time found 7 or 8 weevil larvae in a field approximately one half mile north of Reno. No further trace of the insect in this locality was found during the summer either by myself or the California Quarantine Officials although several examination^s were made. Yesterday however, I found the insect in all three stages and from the size of the larvae judge that oviposition must have commenced as early as April 15".
